DATA SECURITY

COMPATIBILITY

When dealing with data there are no excuses for skipping any of the security measures whether it be a worldwide known mandate or a domestic regulation. In Bilingual Techs we believe that when it comes to security – every single step that customers are going through matters. Nowadays digital security is a must, and everything placed on your website must ensure complete safety.

We are proud to comply with such a vital security standards and regulation as:

- GDPR (General Data Protection Regulation) - is a legal security standard that sets guidelines for accumulation and processing of personal information of individuals within the European Union as well as it directs the export of personal data outside the European Union.
- NTRA (National Telecom Regulatory Authority) - national Egyptian authority competent to regulate and administer the telecommunications sector, aims to enhance and deploy services in compliance with the most advanced technologies.
- National Security – is a legal authority of Egypt that is ensuring all the software to be approved by the Egyptian Homeland Security that guarantees safe and reliable access.

Why data security   Organizations around the globe are investing heavily in information technology (IT) cyber defense capabilities to protect their critical assets. Whether an enterprise needs to protect a brand, intellectual capital, and customer information or provide controls for critical infrastructure, the means for incident detection and response to protecting organizational interests have three common elements: people, processes, and technology.
